/ General Documents of the plasmid UnGCIM Tl-resistant, F-" (1ab_host="E. Coli strain XLIO-Gold, Tl-resistant, F-" (21on=11b="Mususe 10kb plasmid UUGCIM library" (21on=11b="Weator: PWMAIN; Purified genomic DNA from M. (alone="Weator: PWMAIN; Purified genomic DNA from M. (aboute DNA Resource the plasmid DNA Resource (alone DNA Resource (alone DNA Resource (alone DNA Resource)). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was hydrodynamically sheared with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pubMail (31) A1194[9] AP129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to chemically-competent E. coli XLIO-Gold (Stratagene) cells and selected for ampicillin resistance."

Laboratory Moules DNA Resource (Attp://www.jax.orgyresources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified molar excess. The adaptored DNA was purified asize selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells

/clone_lib="Exclisis" pelement XP insertions"
/clone_lib="Exclisis" pelement XP (GenBank accession number AYS15149); An isogenic w- Drosophila melanogaster strain was mutagenized by remobilization of transposable elements. For the P element XP, we selected an easily mobilized ammunition element among inserts hopped onto the Binsinscy balancer. New insertions were collected in vials from dysgenic females using the standard chromosomal source of transposase, deltaz-3. All lines were mapped to a chromosome by standard genetic methods, examined for homozygous viability and used for recovery of flanking genomic sequence by inverse PCR."

This insertion position refers to the first base of the 8 base target recognition sequence.

from the normalized library NCT_GGAP_GG4 was prepared, and
ss circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-1228631, 1469064-1470983, and 1475592-1476743).

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site 1: BamHi; Site_2: BgJII;
RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units. For more information on RescueMu, go to the web site 'www.zamdb.iastate.edu' and follow the links for 'RescueMu.' Grid AA was grown at UC San Diego in 2002. DNA was extracted from leaf strips, double digested using BamHI and BgJII, and ligated to form circular plasmids. DNIOB cells were transformed and then screened on LB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GSS 30-MAY-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Arabidopsis thaliana (thale cress)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                4733,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          52,

Sequence 18, Application US/09538873

Sequence 18, Application US/09538873

Patent NO. 6566500

GENERAL INPORMATION:
APPLICANT: GHETIE, VICTOR F.
APPLICANT: BALUAN, JOAN

TITLE OF INVENTION: SYNDROME (VLS)
FILE REFERENCE: UTSD:603

CURRENT APPLICATION NUMBER: US/09/538,873

CURRENT APPLICATION NUMBER: 06/126,826

BARLIER PILING DATE: 2000-03-30

CURRENT PILING DATE: 1999-03-30

NUMBER OF SEQ ID NOS: 19

SOFTWARE: Patentin Ver. 2.1

LENGTH: 39
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GENERAL INFORMATION:

APPLICANT: VITETTA, ELLEN S.

APPLICANT: VITETTA, ELLEN S.

APPLICANT: GHALUNA, JOAN F.

APPLICANT: BALUNA, JOAN G.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR MODIFYING TOXIC EFFECTS OF TITLE OF INVENTION: PROFEINACEOUS COMPOUNDS

TITLE OF INVENTION: PROFEINACEOUS COMPOUNDS

FILE REFERENCE: UTSD: 884US

; Sequence 165, Application US/09672126B
; Patent No. 6949520
; GENERAL INFORMATION:
    APPLICANT: Hartmann, Gunther
; APPLICANT: Brateler, Robert L.
; APPLICANT: Brateler, Robert L.
; APPLICANT: Krieg, Arthur
; TITLE OF INVENTION: Methods Related to Immunostimulatory;
TITLE OF INVENTION: Nucleic Acid-Induced Interferon
; TILE REFERENCE: 10139/7044
; CURRENT APPLICATION NUMBER: 0/09-07-7
; PRIOR PLIING DATE: 1999-09-29
; NUMBER OF SEQ ID NOS: 169
; SOFTWARE: FESTSEQ for Windows Version 3.0
; SEQ ID NO 165
; LENGTH: 30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   4; Indels

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 447, Sequence 80, Al Sequence 80, Al
